Technical Data Sheet

Description

- OPTICAL FILM COMPRESSION PAD 4Ti-0563 x5

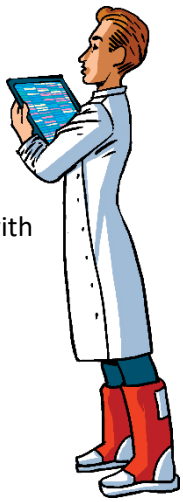

Part number

- 044868

Pieces by sales :

- 5 pads

Technical data

- Compression Pad : Silicone foam mat laminated to a non-stick PTFE film, to be used with adhesive seals, compatible with heated lid cyclers.
  - Reduces evaporation
  - For use with heated lid thermocyclers
  - Aligns with wells on a 96 well plate
- Color : brown
- The Optical Film Compression Pad is a soft silicone foam mat laminated to a non-stick PTFE film. When used in conjunction with an adhesive seal – for instance the qPCR Adhesive Seal (4ti-0560) – and a thermal cycler heated lid, the pad enhances the adhesion between the seal and the PCR plate. This in turn improves results by reducing sample evaporation. The 96 holes align with the wells of the PCR plate, ensuring the mat is compatible with qPCR instrumentation which image through the top of the well.
