CappOrigami™ Reagent Reservoirs

Fold, pour and pipette...!

. V-shape ensures full usage of all reagents
. Flick-up design saves storage space

The CappOrigami™ represents a innovative way of thinking when it comes to reagent reservoirs as subsequently described:

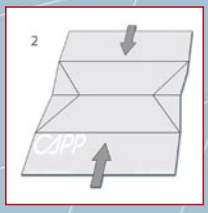

Perfect V-shape
The shape of the reservoir along with the stiffness of the material used ensures that the reservoir forms a sharp V-shape at the bottom. This makes your pipetting easier and also enables you to save on reagents as you only have to pour the amount needed into the reservoir.

Flat when stored
The CappOrigami™ reservoirs are packed as flat sheets. This way, they take up considerably less room in storage.

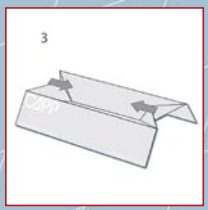

Easy to use
To use a CappOrigami™ reservoir, simply flick it up by pushing the sides together, which is very easy due to the prefolded lines. As soon as the CappOrigami™ reservoir reaches the proper shape you can pour liquid into the reservoir and start pipetting. The folds and the polypropylene material used assure that the reservoirs stay upright once you have folded them into the proper reservoir shape.

Take a flat CappOrigami™ reservoir sheet out of the pack.

Push the two outer sides against the middle to flick the CappOrigami™ reservoir into shape.

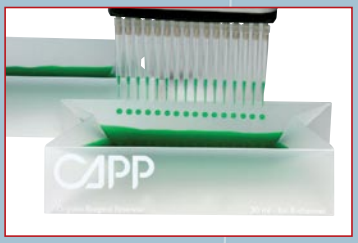

Push the end triangles in to make the CappOrigami™ reservoir ready for use.

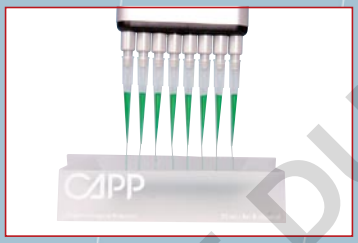

We take pipetting to perfection.
