## Metallic Thermal Beads Mini Dry Bath Blocks Dry Bath Blocks Ultimate Dry Bath Blocks

### For Beads

Major Science offers you the metallic thermal beads as an alternative to the dry bath aluminum blocks. The beads are dry metallic thermal alloy designed to replace water in a water bath and ice in an ice bucket. Not only our metallic thermal beads provide you far less conductive to contamination than a water bath when using in a dry bath incubator, the beads are also recyclable which brings you convenience to eliminate the routine use of harmful germicides and are more energy efficient than water. The metallic thermal beads also help to eliminate maintenance tasks such as emptying, cleaning, monitoring, and refilling the water bath to give you a more hassle-free environment in the lab. We specifically package the beads in a standard package for your ease of ordering.

### For Blocks

The dry bath blocks are designed for the MS Thermoblock Dry Bath Incubator. The precisely machined aluminum alloy blocks deliver efficient heat transfer and are suitable for microplate and various test tubes ranging from 0.2 ml to 50 ml centrifuge tubes. In addition to the standard blocks, customized blocks are also available for specified user requirements.
