# **Chemical resistance** of Socorex® dispensers

Bottle-top dispensers are used daily for dispensing a wide range of chemicals. Therefore, instruments have to meet various requirements assuring safety of the laboratory staff and their work. Dispensers must not give off any substances which may interfere with trace analysis, have cytotoxic properties, distort optical tests or influence chromatographic methods and residue analysis.

### **Materials**

Special attention was paid to component materials (see charts below). All parts of the Acurex™ and Calibrex™ dispensers in contact with the liquid are made of robust and chemically inert materials providing for long instrument life.

| Parts                  | Acurex™ 501                       |
|------------------------|-----------------------------------|
| Valve                  | Pyrex glass and synthetic ruby    |
| Barrel                 | Neutral glass                     |
| Plunger                | PTFE coated glass                 |
| Reservoir              | Amber glass or borosilicate glass |
| Delivery jet and union | PVDF / FEP / PFA                  |

| Parts                 | Calibrex™ 520      | Calibrex™ 521      |  |
|-----------------------|--------------------|--------------------|--|
| Feed tube             | PTFE               |                    |  |
| Intake valve          | Ceramic            | Borosilicate glass |  |
| Valve balls           | Pyrex glass        | Ceramic, ruby      |  |
| Valve springs         | Platinum-Iridium   |                    |  |
| Barrel                | Borosilicate glass |                    |  |
| Barrel plate          | PTFE               |                    |  |
| Plunger               | PFA coated glass   |                    |  |
| Outlet valve          | Ceramic            |                    |  |
| Body                  | ETFE               |                    |  |
| Delivery jet assembly | PTFE/ETFE          |                    |  |

### Chemicals from A to Z

The following list includes most currently used chemicals. It provides useful information for the safe and adequate use of Acurex™ 501 and Calibrex™ 520/521 dispensers. However, safety precautions and recommendations in operating instructions must be followed carefully.

## Code explanations

- A = Good resistance
- **B** = Acceptable with limitations
- C = Not recommended
- 1 = Possible crystallisation blockage (do not let dry plunger/barrel together).
- 2 = Swell of plunger protection layer, possible peeling.
- 3 = Acid vapours (better resistance with lower concentration). Do not leave instrument on bottle.
- 4 = Risk of softening or discoloration of external parts through vapours. Do not leave instrument on bottle.
- 5 = Chemical degradation of glass parts (plunger/barrel).
