

Amersham™ Protran Premium 0.2 NC nitrocellulose Western blotting membranes

Nitrocellulose blotting membrane, with 0.2 µm pore size, for excellent sensitivity.

Overview

Nitrocellulose blotting membrane, with 0.2 µm pore size, for excellent sensitivity.

- Low auto-fluorescence across a wide range of excitation/emission wavelengths makes the membrane suitable for fluorescence-based immunodetection and multiplexing.
- High binding capacity (173 – 203 µg IgG/cm2) of small proteins (< Mr 20 000) reduces risk of "blow-through".
- Available in popular precut sizes for laboratory application.

Excellent sensitivity, resolution and low background

Amersham Protran Premium offers excellent sensitivity, resolution, and low background, especially when used with the fluorescence Amersham ECL Plex Western blotting detection system.

Western blotting sandwiches

For convenience, Western blotting sandwiches (10 sandwiches/package) are available, consisting of pre-cut Amersham Protran Premium 0.2 nitrocellulose membranes preassembled with 2 x 3 mm Chr blotting papers.
Product 10600035: Discontinued. No new products will be manufactured after 30th September 2017. No alternative is available.
