

Amersham™ Hybond P 0.45 PVDF blotting membrane

This PVDF blotting membrane has 0.45 µm pore size, for use with standard colorimetric and chemiluminescent detection methods for proteins of > Mr 20 000.

Overview

This PVDF blotting membrane has 0.45 µm pore size, for use with standard colorimetric and chemiluminescent detection methods for proteins of > Mr 20 000.

- Protein binding capacity over 200 µg/cm2 for easy signal detection.
- High protein retention even after harsh washing steps.
- High protein capture during transfer minimizes sample loss.
- Available in popular precut sizes for laboratory application.

Suitable for stripping and reprobing

Amersham Hybond P 0.45 PVDF is a 0.45 µm pore size hydrophobic membrane, with high physical strength, highly suitable for stripping and reprobing.

Western blotting sandwiches

For convenience, Western blotting sandwiches (10 sandwiches/package) are available, consisting of precut Amersham Hybond P 0.45 PVDF membranes preassembled with 2x3 mm Chr paper.
No overview available for this product.
