

Amersham™ Hybond P 0.2 PVDF Western blotting membrane

0.2 µm PVDF blotting membrane for use with standard colorimetric and chemiluminescent detection methods.

Overview

0.2 µm PVDF blotting membrane for use with standard colorimetric and chemiluminescent detection methods.

- High protein binding capacity for easy signal detection.
- High protein retention even after harsh washing steps.
- Maximum capture of proteins during transfers minimizes sample loss.
- 0.2 µm pore size for higher surface area, resulting in better binding of low molecular weight proteins.
- Available in popular precut sizes for laboratory applications.

Minimizes "blow-through" and increases protein binding

Amersham Hybond P 0.2 PVDF is a 0.2 µm pore size hydrophobic membrane with high physical strength. This results in significant handling advantages over unsupported nitrocellulose and makes the membrane highly suitable for stripping and reprobing. The small pore size of the membrane minimizes "blow-through" and increases protein binding over a wide range of molecular weights.

Western blotting sandwiches

For convenience, Western blotting sandwiches (10 sandwiches/package) are available, consisting of precut Amersham Hybond P 0.2 PVDF membranes preassembled with 2 x 3 mm Chr blotting papers.
Product 10600039: Discontinued. No new products will be manufactured after 30th September 2017. No alternative is available.
Product 10600089: Discontinued. No new products will be manufactured after 30th September 2017. No alternative is available.
Product 10600088: Discontinued. No new products will be manufactured after 30th September 2017. No alternative is available.
