MYWIPE POLYCEL WIPE

DESCRIPTION

Wipe fabricated from a hydroentangled, nonwoven blend of polyester (45%) and cellulose (55%). The fabric combines a high absorptive capacity of a natural fiber with the cleanliness and strength of a synthetic fiber. Ideal for application where a high absorbency and low extractable levels are prime consideration. The wipe is suitable for cleaning precision devices and lab equipment. Absence of chemical binders. This wipe is cleanroom laundered and double packaged. It can be sterilizable in autoclave.
