

Polycarbonate Holders for the Clarification or Sterile Filtration of up to about 200 ml Volumes of Aqueous Solutions

Type 16510 is complete with a receiver flask and can be operated with sub-pressure as well as with slight over-pressure (0.5 bar is recommended for highest standing times). It is, together with a vacuum hand pump, a practical, cost-effective system for the filtration in and outside the laboratory.

For sterile filtrations, the filter holder, included in the delivery, is equipped with a glass fiber filter 13400-0013 and enables sterile venting for pressure compensation in order to avoid contamination of the sterile filtrate. The funnel fits onto the central opening of the lid and simplifies filling the liquid in the top part.

Type 16511 is like 16510, but without a receiver flask. It is used on a suction flask or a vacuum manifold, e.g. Combisart, see page 166.
