

'Roughage Rolls' trimmed, irradiated > 25kGy

Composition

Straw	60.0 %
Ventilated hay	34.0 %
Molasses	6.0 %

Use application

'Roughage Rolls' are enrichment feed with high structural fiber content. They are steam conditioned and compressed.

The rolls are offered to laboratory animals as a natural feed enrichment. Animals may gnaw rolls at any time.

All raw materials are thoroughly selected. They are rigorously controlled for quality. An important step in the complex production process is the pneumatic removal of dusty particles.

Hygienic status: 'Roughage Rolls' are packed in hermetically closed 3 fold bag. Product is irradiated > 25 kGy. Subsequently, product is microbiologically tested.
