Whatman™ polyester drain discs

Binder-free polyester drain discs provide membrane support to improve flow rates and throughput, with applications in sterility testing, quality control and HPLC.

Overview

For use with membrane hardware where extra support is needed for improved flow rate and throughput. The polyester drain disk is binder free and has a thickness of 100um. It provides a flat surface to prevent filter tearing or rupturing. It is also used as a separator between membrane layers in serial stack filtration applications. This chemically inert support disc is available in a variety of diameters for use in a range of devices. Applications include: general laboratory microfiltration, quality control and sterility testing, removal of particles from HPLC solvents, and tissue culture media filtration.

Product specifications
Whatman polyester drain disc, 10 mm, PE, membrane filter accessories

Catalog code	230300
Air flow rate	-
Diameter	10 mm
Liquid flow rate	-
Filter media	Polyester (PE)
Pack size	1/pack
Sterility (statement for yes*)	Non-sterile
Binder type	Binder free
