Break through time: > 480 min Glove thickness: 0,7 mm Butoject® 898 Gloves must be inspected prior to use. Replace when worn. Remarks:Supplementary note: The specifications are based on information and tests from similar substances by analogy. Due to varying conditions (e.g.temperature or other strains) it must be considered that the usage of a chemical protective glove in practice may be much shorter than the permeation time determined in accordance with EN 374. Since actual conditions of practical use often deviate from standardised conditions according EN 374 the glove manufacturer reccomends to use the chemical protective glove in practice not longer than 50% of the recomended permeation time. Manufacturer's directions for use should be observed because of great diversity of types . Suitable gloves tested according EN 374 are supplied e.g. from KCL GmbH, D-36124 Eichenzell, Vertrieb@kcl.de Eye protection: Safety goggles Skin and body protection: Flame retardant antistatic protective clothing. Working clothes must not consist of textiles, which show a dangerous melting behaviour in case of fire.

### Environmental exposure controls

Handle in accordance with local environmental regulations and good industrial practices.
