

# Enteropluri-Test

*System for Enterobacteriaceae Identification*

*Remove both caps of the system. Using the tip of inoculating needle, pick up a well isolated colony from a culture medium.*

*Inoculate **Enteropluri-Test** turning and withdrawing the needle throughout the sectors of the system. Reinsert the needle with a turning movement until the breakage notch; break the inoculating needle folding it in correspondence with the notch.*

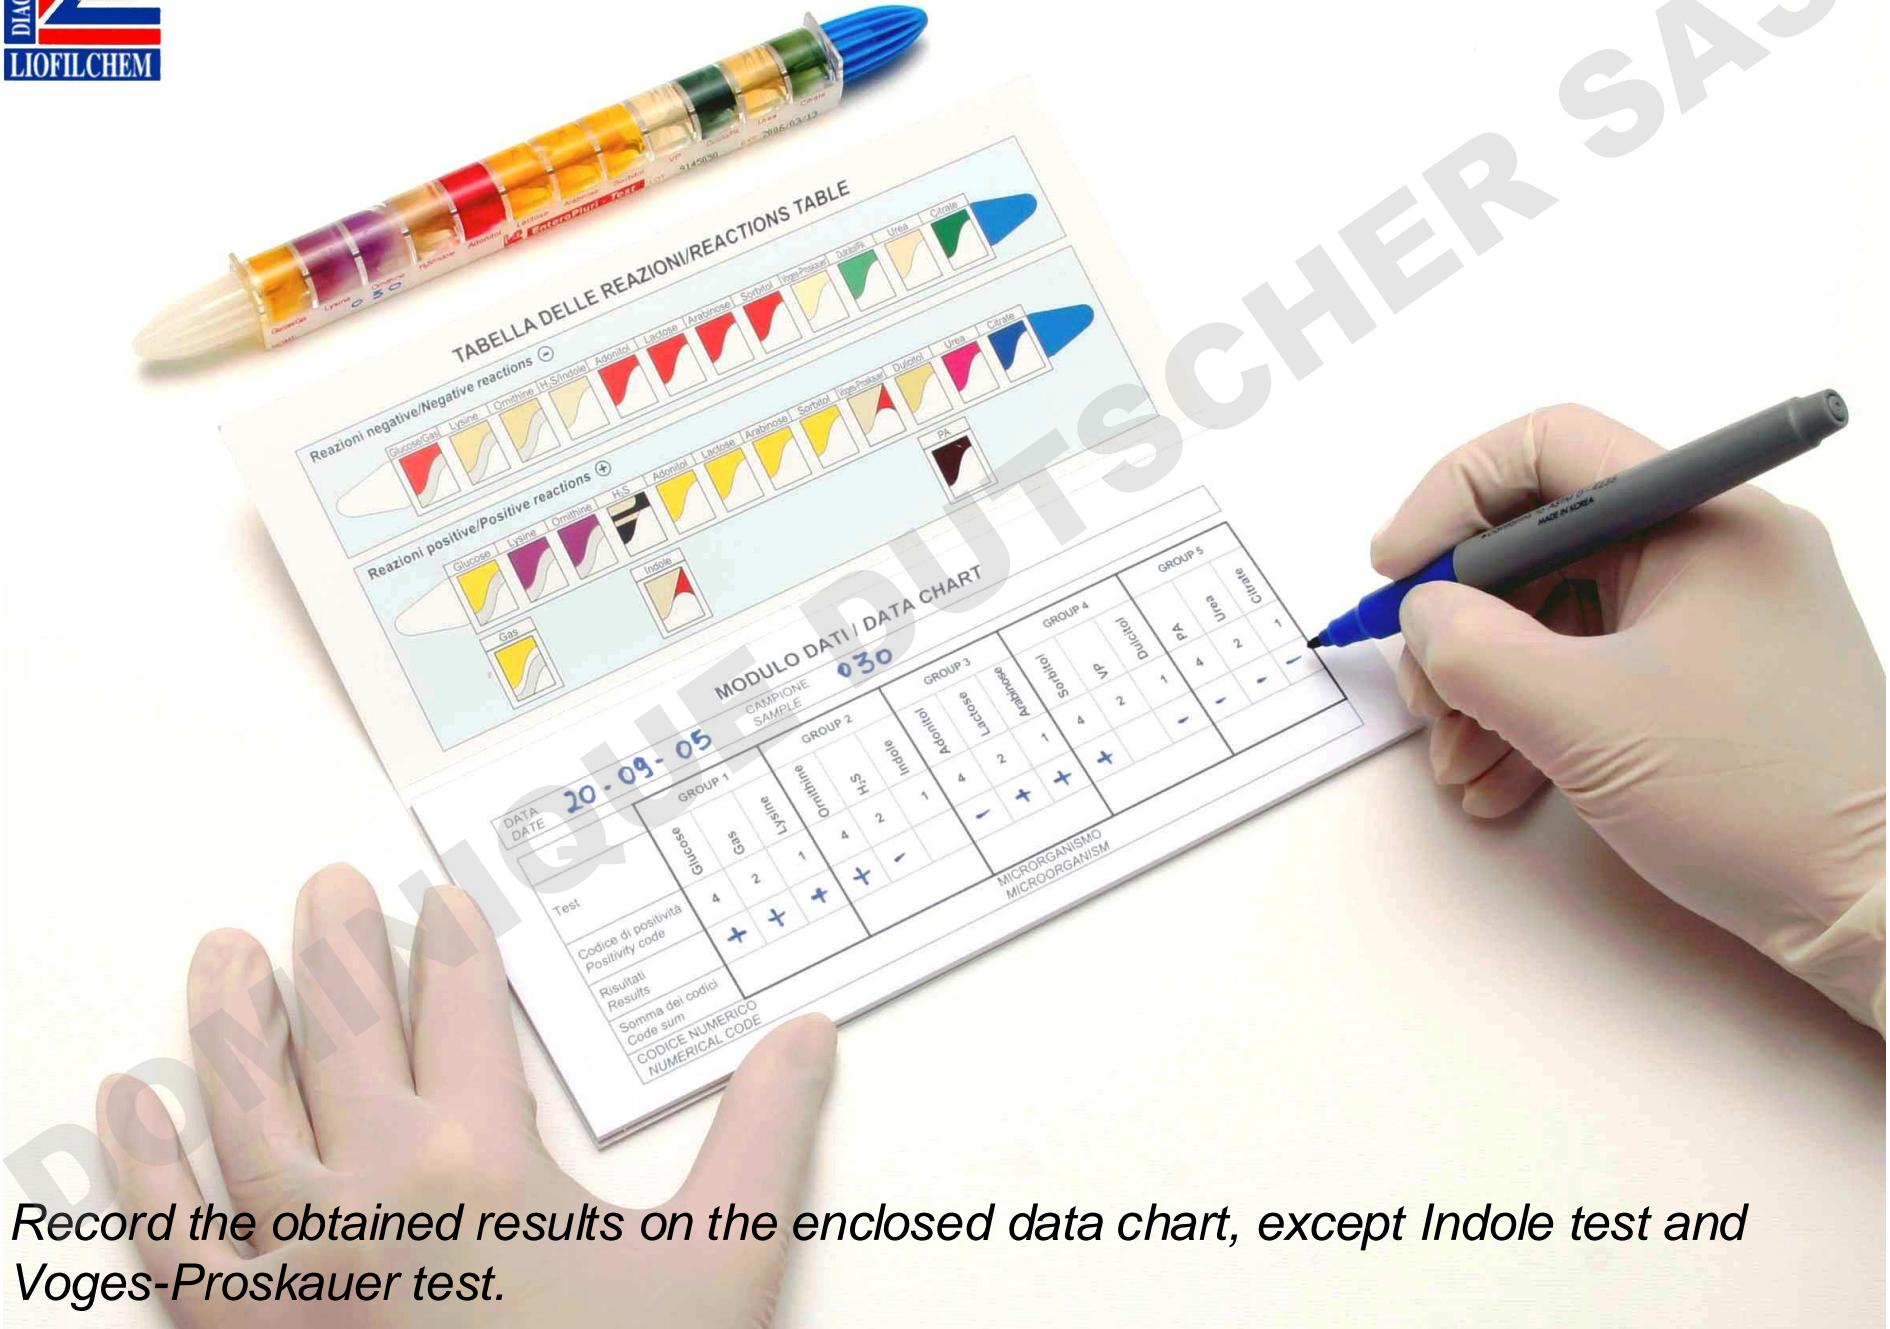

*The portion of the needle remaining inside the system keeps anaerobic conditions necessary for reactions of the sectors **Glucose/Gas**, **Lysine** and **Ornithine**.*

*Use the broken portion of the needle to punch the plastic film on the holes of the sectors **Adonitol**, **Lactose**, **Arabinose**, **Sorbitol**, **VP**, **Dulcitol/PA**, **Urea**, **Citrate**.*

*Screw again both caps and incubate **Enteropluri-Test** at  $36 \pm 1$  °C for 18-24 hours, putting it on its flat surface or vertically.*

*Inject with a syringe 3 or 4 drops of Kovac's Reagent in the sector  $H_2S/Indole$ .*

*Inject with a syringe 3 drops of alpha-naphtol and 2 drops of potassium hydroxide in the sector VP.*

Form the 5-digit code following the instructions and identify the bacterium using the **Codebook**.
