Directive 98/79/EC. "In vitro" diagnostic medical devices

INTENDED USE

Hospital use, as a containment container with safety closure for transporting biological samples of human origin (urine, aspirates, sputum, biopsies, ...) between hospital departments (for example: from the operating room to pathology, from microbiology to biochemistry, from emergency to different laboratories, etc.).

Intended for the transport of both solid and liquid samples, as well as anatomical specimens with Formaldehyde (Formalin).

DESCRIPTION

Manufactured in translucent polypropylene with yellow polyethylene cap. Container neck with continuous thread. Body graduated in ml. They are provided with **double internal security closure**, so the leakproof closure makes them able to transport liquid samples without risks. Supplied uncapped with the caps and containers in the same box. Ideal for the pneumatic transport of liquid samples, including those that have Formaldehyde (Formalin).

The base and the cap are ribbed so the handling with gloves is comfortable and reliable. There is a ring in the upper part of the body, in order to avoid the dripping in case of liquid decanting. For other colors (blue, orange, magenta), ask for the minimum orders quantities.
