· ***Additional toxicological information:***
Prolonged exposure and / or massive amount of respirable dust containing quartz can cause silicosis and pulmonary fibrosis due to the deposition of respirable particles for crystalline silica.
Given that the European Community at the date of this safety data sheet does not classify crystalline silica (alpha quartz) as a hazardous substance and / or carcinogenic, and at present there are no requests for changes on the part of Member States, it shall, as follows:
B. The I.O.M. (Institute of Occupational Medicine), on the carcinogenicity of crystalline silica has concluded that "the data resulting from investigating epidemiological tasks, are inadequate to determine whether crystalline silica is considered to be carcinogenic to humans" also "you may notice a predisposition development of lung cancer in people silicotici although it is not possible to determine a direct effect of silica in it. "
(Scientific Opinion on the Health Effects of Airborne Crystalline Silica, A. Pilkington, W. McLaren, A. Scarl, JMG Davis, JF Jurley, CA Soutar, JC Pairon, J. Bignon, IOM Report TM/96/08, Institute of Occupational Medicine, Edinburgh Jan. 99).
D. On April 25, 2006 was signed a voluntary agreement between the parties (Social Dialogue Agreement on Silica), at European level on how to prevent to be taken in the sectors concerned, to prevent risks from exposure to free crystalline silica dust breathable. The agreement came into force on 25 October 2006.
