HI3874-0 - Nitrate Reagent

Revision nr.5 Dated 03/03/2023 Printed on 09/03/2023 Page n. 1 / 14 Replaced revision:4 (Dated 12/08/2022)

	Safe	ty Data S	heet
According to A	nnex II to REACH -	Regulation 2020/8	78 and to Annex II to UK REACH
ECTION 1. Identification of the sub	ostance/mixture	e and of the c	ompany/undertaking
1. Product identifier			
Code Product name	HI3874-0 Nitrate Reage	ent	
.2. Relevant identified uses of the substance or r	-		
Intended use		n of Nitrate in Wate	er Samples.
3. Details of the supplier of the safety data shee	t		
Name	Hanna Instru		
Full address	str. Hanna Nr		
District and Country	457260	loc. Nusfalau Romania	(Salaj)
	Tel.	+40 260607700	
e-mail address of the competent person	Fax	+40 260607700	
responsible for the Safety Data Sheet	msds@hanna	a.ro	
. Emergency telephone number			
For urgent inquiries refer to	International: hours/365 da		UK, London: +44 2038073798 - CHEMTREC 24
ECTION 2. Hazards identification			
1. Classification of the substance or mixture			
The product is classified as hazardous pursuar amendments and supplements). The product t			
2020/878.			
Any additional information concerning the risks		le environment are	given in sections in and 12 of this sheet.
Hazard classification and indication:			
Carcinogenicity, category 1B		H350 H341	May cause cancer.
Germ cell mutagenicity, category 2 Reproductive toxicity, category 2		H341 H361fd	Suspected of causing genetic defects. Suspected of damaging fertility. Suspected of
		1.00110	damaging the unborn child.
Acute toxicity, category 3		H331	Toxic if inhaled.
Specific target organ toxicity - repeated exp	oosure,	H372	Causes damage to organs through prolonged or
category 1 Skin corrosion, category 1A		H314	repeated exposure. Causes severe skin burns and eye damage.
Serious eye damage, category 1		H314 H318	Causes serious eye damage.
Skin sensitization, category 1		H317	May cause an allergic skin reaction.
Hazardous to the aquatic environment, acu	te	H400	Very toxic to aquatic life.
toxicity, category 1 Hazardous to the aquatic environment, chro toxicity, category 2	onic	H411	Toxic to aquatic life with long lasting effects.
2. Label elements			
Hazard labelling pursuant to EC Regulation 12	72/2008 (CLP) and	subsequent amen	dments and supplements.
		- according the first	
Hazard pictograms:			

HI3874-0 - Nitrate Reagent

Revision nr.5 Dated 03/03/2023 Printed on 09/03/2023 Page n. 2 / 14 Replaced revision:4 (Dated 12/08/2022)

The full wording of hazard (H) phrases is given in section 16 of the sheet.

SECTION 4. First aid measures

4.1. Description of first aid measures

EYES: Remove contact lenses, if present. Wash immediately with plenty of water for at least 30-60 minutes, opening the eyelids fully. Get medical advice/attention.

SKIN: Remove contaminated clothing. Rinse skin with a shower immediately. Get medical advice/attention.

INGESTION: Have the subject drink as much water as possible. Get medical advice/attention. Do not induce vomiting unless explicitly authorised by a doctor.

INHALATION: Get medical advice/attention immediately. Remove victim to fresh air, away from the accident scene. If the subject stops breathing, administer artificial respiration. Take suitable precautions for rescue workers.

4.2. Most important symptoms and effects, both acute and delayed

Specific information on symptoms and effects caused by the product are unknown.

POTASSIUM DISULFATE

Irritation and corrosion, Cough, Shortness of breath. Risk of blindness!

SULFANILIC ACID

Irritant effects, Allergic reactions. The following applies to aromatic amines in general: systemic effect: methaemoglobinaemia with headache, cardiac dysrhythmia, drop in blood pressure, dyspnoea, and spasms, principal symptom: cyanosis (blue discolouration of the blood).

CADMIUM (non pyrophoric)

Irritant effects, Cough, Shortness of breath, Diarrhoea, Nausea, Vomiting, Salivation, metallic taste.

COPPER (II) SULFATE Irritant effects, conjunctivitis, gastric pain, Diarrhoea, Vomiting, collapse, death Risk of corneal clouding.

4.3. Indication of any immediate medical attention and special treatment needed

Information not available

SECTION 5. Firefighting measures

5.1. Extinguishing media

SUITABLE EXTINGUISHING EQUIPMENT The extinguishing equipment should be of the conventional kind: carbon dioxide, foam, powder and water spray. UNSUITABLE EXTINGUISHING EQUIPMENT None in particular.

5.2. Special hazards arising from the substance or mixture

HAZARDS CAUSED BY EXPOSURE IN THE EVENT OF FIRE

Do not breathe combustion products. The product is combustible and, when the powder is released into the air in sufficient concentrations and in the presence of a source of ignition, it can create explosive mixtures with air. Fires may start or get worse by leakage of the solid product from the container, when it reaches high temperatures or through contact with sources of ignition.

POTASSIUM DISULFATE

Not combustible. Ambient fire may liberate hazardous vapours. Fire may cause evolution of: Sulphur oxides.

SULFANILIC ACID

Combustible. Development of hazardous combustion gases or vapours possible in the event of fire. Fire may cause evolution of: Sulphur oxides, nitrogen oxides.

COPPER (II) SULFATE Not combustible. Ambient fire may liberate hazardous vapours.Fire may cause evolution of: Sulphur oxides.

5.3. Advice for firefighters

GENERAL INFORMATION

HI3874-0 - Nitrate Reagent

FN

Use jets of water to cool the containers to prevent product decomposition and the development of substances potentially hazardous for health. Always wear full fire prevention gear. Collect extinguishing water to prevent it from draining into the sewer system. Dispose of contaminated water used for extinction and the remains of the fire according to applicable regulations. SPECIAL PROTECTIVE EQUIPMENT FOR FIRE-FIGHTERS

Normal fire fighting clothing i.e. fire kit (BS EN 469), gloves (BS EN 659) and boots (HO specification A29 and A30) in combination with self-contained open circuit positive pressure compressed air breathing apparatus (BS EN 137).

SECTION 6. Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures

If there are no contraindications, spray powder with water to prevent the formation of dust. Wear suitable protective equipment (including personal protective equipment referred to under Section 8 of the safety data sheet) to prevent any contamination of skin, eyes and personal clothing. These indications apply for both processing staff and those involved in emergency procedures.

6.2. Environmental precautions

The product must not penetrate into the sewer system or come into contact with surface water or ground water.

6.3. Methods and material for containment and cleaning up

Collect the leaked product and place it in containers for recovery or disposal. If there are no contraindications, use jets of water to eliminate product residues.

Make sure the leakage site is well aired. Evaluate the compatibility of the container to be used, by checking section 10. Contaminated material should be disposed of in compliance with the provisions set forth in point 13.

6.4. Reference to other sections

Any information on personal protection and disposal is given in sections 8 and 13.

SECTION 7. Handling and storage

7.1. Precautions for safe handling

Keep away from heat, sparks and naked flames; do not smoke or use matches or lighters. Without adequate ventilation, vapours may accumulate at ground level and, if ignited, catch fire even at a distance, with the danger of backfire. Avoid bunching of electrostatic charges. When performing transfer operations involving large containers, connect to an earthing system and wear antistatic footwear. In order to avoid the risk of fires and explosions, never use compressed air when handling. Open containers with caution as they may be pressurised. Do not eat, drink or smoke during use. Avoid leakage of the product into the environment.

7.2. Conditions for safe storage, including any incompatibilities

Store only in the original container. Store the containers sealed, in a well ventilated place, away from direct sunlight. Store in a cool and well ventilated place, keep far away from sources of heat, naked flames and sparks and other sources of ignition. Keep containers away from any incompatible materials, see section 10 for details.

6.1A

Storage class TRGS 510 (Germany):

7.3. Specific end use(s)

Information not available

SECTION 8. Exposure controls/personal protection

8.1. Control parameters

SECTION 10. Stability and reactivity

10.1. Reactivity

There are no particular risks of reaction with other substances in normal conditions of use.

SULFANILIC ACID

Decomposes without melting at temperatures > 288°C/550°F.

10.2. Chemical stability

The product is stable in normal conditions of use and storage.

10.3. Possibility of hazardous reactions

The powders are potentially explosive when mixed with air.

CADMIUM (non pyrophoric)

Risk of explosion on contact with: zinc,ammonium nitrate,heat.

May react dangerously with: ammonia, potassium, lithium, phosphorus trichloride, selenium, strong oxidising agents, potassium chlorate. COPPER (II) SULFATE

Exothermic reaction with: Strong oxidizing agents, hydroxylamine, magnesium.

10.4. Conditions to avoid

Avoid environmental dust build-up.

POTASSIUM DISULFATE Exposure to moisture.

COPPER (II) SULFATE Strong heating (decomposition).

10.5. Incompatible materials

SULFANILIC ACID

Strong acids and bases. Incompatible with alkyl oxides, aliphatic amines, alcanolamines, amides, ammonia, epichlorohydrin, organic anhydrides, isocyanates, vinyl acetates and oxidising agents.

10.6. Hazardous decomposition products

SULFANILIC ACID Sulphur oxides, nitric oxides.

SECTION 11. Toxicological information

11.1. Information on hazard classes as defined in Regulation (EC) No 1272/2008

POTASSIUM DISULFATE

Acute inhalation toxicity, absorption, Symptoms: mucosal irritations, Cough, Shortness of breath, Possible damages, damage of respiratory tract, Lung oedema, Symptoms may be delayed - Skin irritation (in analogy to similar products), Causes severe burns. -Eye irritation (in analogy to similar products), Causes serious eye damage. Risk of blindness!

SULFANILIC ACID

Acute inhalation toxicity, Symptoms: Possible damages, Irritation symptoms in the respiratory tract - Skin irritation, rabbit, Result: slight irritation, Causes skin irritation - Eye irritation, rabbit, Result: Eye irritation, Causes serious eye irritation - Sensitisation Sensitisation test: guinea pig, Result: positive, May cause an allergic skin reaction.

CADMIUM (non pyrophoric)

Symptoms: mucosal irritations, Cough, Shortness of breath, Inhalation may lead to the formation of oedemas in the respiratory tract. Absorption - CMR effects, Carcinogenicity: May cause cancer - Mutagenicity: Suspected of causing genetic defects - Teratogenicity: Suspected of damaging the unborn child - Reproductive toxicity: Suspected of damaging fertility.

COPPER (II) SULFATE

Skin irritation. Causes skin irritation - Eve irritation. Risk of corneal clouding, conjunctivitis, Causes serious eve irritation -Genotoxicity in vivo, Mutagenicity (mammal cell test): micronucleus, Result: negative (National Toxicology Program) - Genotoxicity in vitro Ames test, Salmonella typhimurium, Result: negative.

12.6. Endocrine disrupting properties

COPPER (II) SULFATE

Fungicide. Discharge into the environment must be avoided.

Based on the available data, the product does not contain substances listed in the main European lists of potential or suspected endocrine disruptors with environmental effects under evaluation.

12.7. Other adverse effects

Information not available

SECTION 13. Disposal considerations

13.1. Waste treatment methods

Reuse, when possible. Product residues should be considered special hazardous waste. The hazard level of waste containing this product should be evaluated according to applicable regulations.

Disposal must be performed through an authorised waste management firm, in compliance with national and local regulations. Waste transportation may be subject to ADR restrictions.

CONTAMINATED PACKAGING

Contaminated packaging must be recovered or disposed of in compliance with national waste management regulations.

Note for users:

The information contained in the present sheet are based on our own knowledge on the date of the last version. Users must verify the suitability and thoroughness of provided information according to each specific use of the product.

This document must not be regarded as a guarantee on any specific product property.

The use of this product is not subject to our direct control; therefore, users must, under their own responsibility, comply with the current health and safety laws and regulations. The producer is relieved from any liability arising from improper uses. Provide appointed staff with adequate training on how to use chemical products.

CALCULATION METHODS FOR CLASSIFICATION

Chemical and physical hazards: Product classification derives from criteria established by the CLP Regulation, Annex I, Part 2. The data for evaluation of chemical-physical properties are reported in section 9.

Health hazards: Product classification is based on calculation methods as per Annex I of CLP, Part 3, unless determined otherwise in Section 11.

Environmental hazards: Product classification is based on calculation methods as per Annex I of CLP, Part 4, unless determined otherwise in Section 12.

Changes to previous review: The following sections were modified: 03 / 08 / 09 / 11 / 12 / 16.
