Hazardous substance labeling/safety data sheets - Exemptions for medicinal products and cosmetics -

Dear Sir or Madam,

The hazardous substances law requires the labeling of hazardous substances and preparations. In addition, there is an obligation to prepare safety data sheets for these products. As a service, BODE Chemie GmbH also provides operating instructions for all products classified as hazardous. Both safety data sheets and operating instructions are available to you online on our website, without any restriction.

For authorised medicinal products and cosmetics, the following exemptions apply:

- There is no obligation to prepare a safety data sheet for these products. (REACH Regulation (EC) 1907/2006 Article 2 (6))
- For these products there is no obligation for hazardous substance identification on the label, even if they are classified according to hazardous substance law. (CLP Regulation (EC) 1272/2008 Article 1(5))

For its pharmaceuticals, BODE Chemie GmbH prepares "product information" based on the safety data sheets, which are also published on the website and sent out on request.

Best regards,

BODE Chemie GmbH
