

HOT FIREPoL® MultiPlex Mix

For amplification of multiple targets in a single reaction tube

DEVELOPED FOR MULTIPLEX PCR

- Get more information from each reaction
- Sensitive and specific results

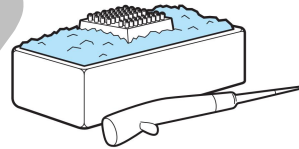

Multiplex amplification of different genes from human gDNA. Amplicons ranging from 122 bp to 1340 bp in size.

CONVENIENT

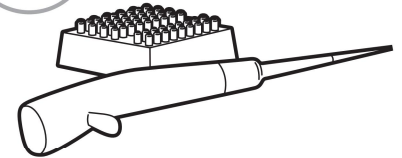

- Reaction set-up without dry ice
- Multiplex PCR saves your time, reagents and template
- 5x concentration leaves more room for primers and DNA
- Ready to use master mix with and without loading dyes

REACTION SET-UP ON ICE

REACTION SET-UP AT ROOM TEMPERATURE

EXCELLENT PRICE-QUALITY RATIO

- Reduced set-up time and cost
- Free sample available
