»Design the freezer around the sample.«

By combining the longevity and quality of our U725-G family with future-proven sample monitoring and management systems, we designed a new icon for -86 °C ULTs: **The CryoCube F740 series.**

Concerned about your sample safety?

- > Temperature monitoring and data export for documentation
- > Controlled access to samples for highest safety
- > Dedicated alarm and backup system for 24/7 sample safety

Suffering from energy bills?

- > High-efficiency insulation for low power consumption
- > Special gaskets at inner and outer doors
- > High-efficiency compressor systems provide excellent performance with minimized energy usage

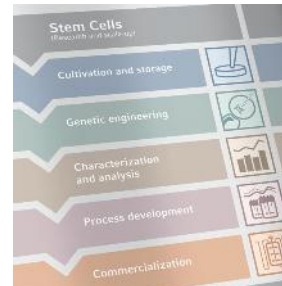

Lost in samples?

- > Broad range of metal racks for flexible vessel usage
- > Set of storage boxes fitting to standard vessel sizes
- > Sample management system to keep your inventory clean

Life Science Revolves Around the Sample

Your processes and workflows require you to invest a lot of time and a lot of resources. So much of your success depends on care and handling of your valuable samples. After spending countless hours considering the many devices and steps utilized to create the sample, have you adequately considered where you will store it? Does your long-term storage solution match the value of your process and sample?

After all this work, do you know where your samples are?

Stem Cells Work

Research and scale-up
The wide-ranging field of stem cell research deals with embryonic and adult stem cells (e.g. mesenchymal and neural stem cells) or induced pluripotent cells. Scientists investigate developmental biology from the challenges such as under differentiation, cell specialization, and cell death. Stem cells are evolving tools for cell-based assays.

Genome editing / CRISPR-Cas9
Prokaryotic and eukaryotic cells. The recent CRISPR-Cas9 genome editing method uses RNA-guided nucleases. That makes the process faster, rarer and more specific compared to other gene editing methods. Since the DNA-binding element is RNA, it is simple and cheap to manipulate and it allows sequence specific programming. The high targeting efficiency, results in significant time saving, e.g., for the generation of knockout mice. Furthermore, alteration of multiple genes in one step is possible (multiplexing).

In basic research CRISPR-Cas9 is used for gene editing and animal models (e.g. zebrafish, mouse) to investigate biological processes. In agriculture genome editing is used to improve crop yields and disease resistance. In the industry, genome editing is used for the production of bioactive peptides and enzymes.

Bioprocessing R&D Workflow

Microorganisms and cells
Research and process development are key elements in the creation of faster, lower-cost methods for producing bio-based products. Bioprocess systems that enable users to work with small volumes save valuable resources. At the same time, an industry-standard design delivers the precision required for operation under production-like conditions.

Advanced software solutions
Advanced software solutions feature real-time process control as well as comprehensive data and information management. The Quality by Design (QbD) approach and statistical tools such as Design of Experiments (DoE) promote faster development. Single-use bioreactors improve turnaround times and simplify validation.

Bioprocessing Workflow

Food industries use microorganisms as alcoholic fermentation and the production of enzymes. Bacteria and yeasts are used in the production of food additives, flavors, and bioactive peptides. The product range ensures an ideal solution for the food industry.

We combine scalable bioprocess hardware products with modern software solutions to produce globally leading technologies. From searching for an advanced yeast in breweries to production processes for nutrition supplements – our joint to production-scale fermenters and smart software will help you all the way through.

Last but not least, stem cells are used in regenerative medicine. Comparing different cell lines in order to find the most suitable one for cell-based assays.

eppendorf

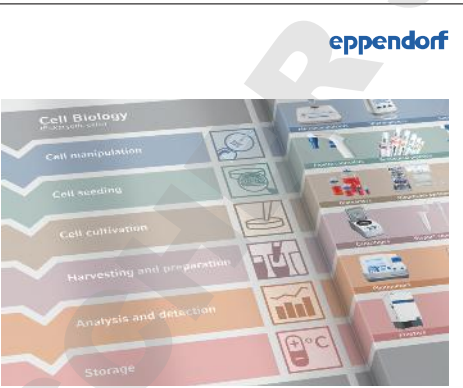

flow

At least, cell therapy is on everyone's lips, since we have the potential to cure a broad range of diseases. We are looking into establishing the necessary preconditions for commercializing stem cell research by developing cell culture methods and expanding cell lines to make cultivation processes reliable and

Next Generation Sequencing

Efficiency
The elucidation of the DNA sequence of virtually all organisms in the fields of genetics, oncology, and cellular biology. Sequencing devices use the capillary electrophoresis technique.

The invention of the next-generation sequencing technique largely eliminated the need for cloning and subcloning of DNA fragments.

Cell Biology Workflow

Eukaryotic cells
Cell biology is a branch of biology that studies cells — the organisms they contain, their functions, their physiological properties, their life cycles, their interactions with their environments, etc. Basic research in cell biology can be divided into several subfields: the study of cell metabolism, the study of cell genetics and the underlying regulatory mechanisms, the study of cell compartment structures, the study of cell cycles, division and death, and the study of cell communication and signaling. Research in cell biology overlaps to a great extent with other areas of biology and chemistry, particularly genetics, biochemistry and molecular biology.

eppendorf

eppendorf

Molecular Biology Workflow

Purification and analysis
The aim of molecular biology is to analyze and understand the molecular basis of biological processes. Molecular biology concerns itself with the function of DNA-RNA sequences and the interaction between DNA, RNA and proteins. Furthermore, it overlaps to a great extent with other areas of biology and chemistry, particularly biochemistry and genetics.

One of the most important molecular biology methods is the polymerase chain reaction (PCR). This procedure is used to exponentially amplify a specific segment of DNA for various downstream applications such as DNA cloning (genetic engineering), gene expression analysis (RT-PCR, RT-qPCR), genetic fingerprinting (forensics), and sequencing (next-generation sequencing), among others.

Safety by Design

What are the building blocks for a safe sample harbor?

- > Robust stainless-steel bodies
- > Polyurethane foam insulation enforced by high-quality Vacuum Insulated Panels
- > Flat and flexible outer gaskets
- > Optimized inner gaskets
- > High-efficient and reliable cascade compressor systems
- > Precise temperature management

The crucial factor for a steady -86 °C?: You

How often do you open the ULT freezer door per day? For how long? It is best practice to always enter and exit the freezer as quickly as possible when storing new samples or attempting to locate a vial or tube which is stored out of sight. However, this takes time.

The more time it takes, the more the temperature of both the cabinet and your frozen samples increases. The samples are exposed to the warm environment. The longer the door remains opened, the more efficient and reliable compressors systems you need to guarantee fast recovery and pull-down back to -80 °C.

The more inner doors your ULT has, the smaller the exposure factor of your stored samples to the warm environment.

Pull-down times to -85 °C/-80 °C

This graph charts the pull-down times for a CryoCube F740 to reach -85 °C and for six competitors to reach -80 °C. Despite getting 5 °C cooler, the CryoCube F740 still beats the competition. All measurements based on published data.

Confidence in Quality

Eppendorf has a long-standing history of innovation and quality, and our freezer manufacturer process is no exception. Each Eppendorf ULT freezer is thoroughly inspected to meet our rigorous quality guidelines. This process is documented by an individual certificate, complete with serial number, provided as standard for your documentation.

As your expert partner for reliable, high-quality, and efficient storage solutions, Eppendorf finely engineers each freezer with care, using only the highest quality materials to ensure a long lasting freezer that offers peace of mind and security. CryoCube Freezers are designed to offer a long-term value over the lifetime of its ownership.

You can entrust your valuable samples to the new Eppendorf CryoCube F740 series, and you can trust your investment in the all finely-engineered Eppendorf instruments.

eppendorf

Eppendorf Certificate

Certificate of Quality

Eppendorf Ultra- Low Temperature Freezer

Eppendorf Ultra- Low Temperature Freezers are manufactured in a controlled area and each individual freezer is tested after production. Tests (e.g. pull-down time, condenser, heat exchanger, and cabinet temperature) are performed in a separate area.

Freezer Model: U101 230V 50Hz
Serial Number: F101XXXXXXX

Expanded Options for Enhanced Security

We had a simple, yet ambitious, goal for designing the CryoCube F740: to take what was great about our Innova ULT Freezers and make it even better. This resulted in a top-of-the-line freezer; a proven concept backed by technological innovation:

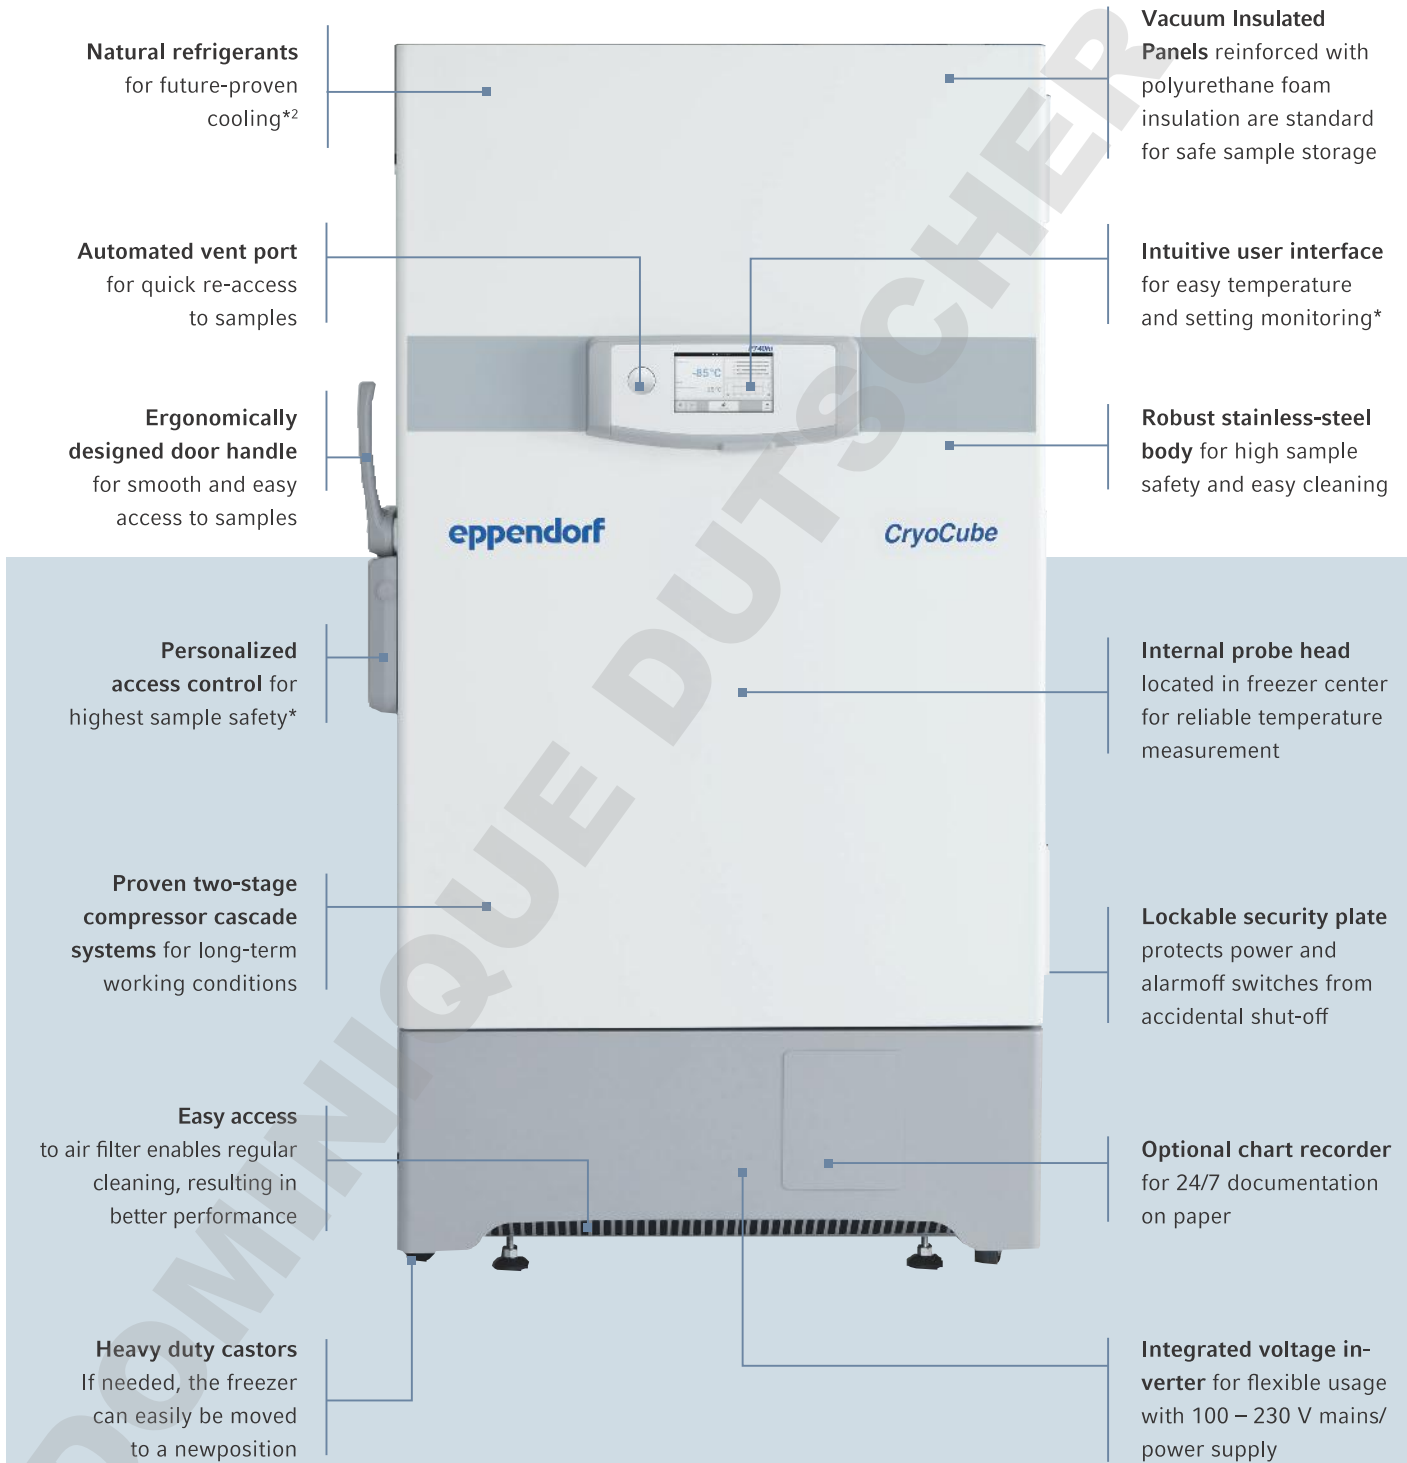

- > Reduced power consumption translates to lower operating costs
- > Engineered for quiet operation to provide better working conditions
- > Unique user access and logging provide the highest in sample security and safety in advanced interface models
- > Increased sample storage capacity over its predecessor
- > Optimized temperature accuracy for safe sample storage
- > Insulated inner doors with gaskets minimize temperature fluctuation during samples access
- > Inverter controller allows freezer to be used on 100, 115, 208, and 230 V circuits with a simple change of power cable
- > 3 or 5 inner compartments for flexible lay-out
- > Choose left- or right-handed outer door for greater flexibility
- > 5 models available; you can select the best fit for your needs:

CryoCube® F740hi

*Available on 'i' series models.

Personal storage preference – 3 or 5 compartment/shelf versions for high flexibility of sample storage. Stainless steel interior for easy cleaning.

Less force wanted – ergonomic door handle for easy opening of door. Control access – personalized access codes*, when necessary.

Silence level – optimized air channel reduces noise output down to 47.8 dB*. Flexible monitoring – use ethernet, RS485, or standard remote alarm socket (BMS/potential free contact).

External probes or back ups – two access ports in the upper corner. Keep the cold inside – broad and flexible outer gaskets.

Constant conditions – air shrouds for fast circulation. Keep your fingers safe – rounded metal rims at shelves.

Double your safety – gaskets for inner doors by standard to reduce loss of cold. Easy access – magnetic click door system.

*Available on 'i' series models.

Complete Control

Worried about the safety of your high value samples within your ULT freezer? With the Eppendorf ULT monitoring concept available on 'i' series models, you can check the freezer performance whenever you want. All temperature data and all events are stored in the freezer control unit.

Focus on the Essentials

The handling concept is based on our longterm expertise of Eppendorf PhysioCare combined with extensive user test sessions.

- > On-board data storage means you are not dependant on auxillary and secondary devices to keep track of freezer data
- > Easily transfer your information to your computer or colleague using the export feature and front-mounted USB port
- > Quickly and easliy adjust your setpoints with a single finger, even while wearing gloves
- > Conveniently see all your important settings and data on a single screen with customizable views
- > Intuitive interface for easy handling
- > Event tracking for controlled environments
- > Easily exchange data for documentation by USB
- > Electronic lock system* for controlled access and higher sample safety
- > Adaptable alarm settings for individual needs

Quickly review your important parameters on the Home Screen

Easily review your freezer history on the Temperature Monitoring Screen

Stay Organized

Keep track of your samples with eLabInventory

eLabInventory is a sample management software provided by BiolTech. The tool organizes any item in the laboratory inventory, including specimens, materials, samples, and chemicals. Store samples in self-configured storage units such as freezers or refrigerators. eLabInventory is flexible and fully configurable to work in your laboratory.

- > Centralized system for single or multiple labs
- > Fully configurable to fit any type of laboratory
- > Stores any type of samples, specimens, and materials for high flexibility
- > Works on any device, delivered via the cloud or on-premise
- > Intuitive user interface incl. visual inventory browsing for easy handling
- > Barcode labeling for high-throughput
- > Import/export to other formats for data flexibility
- > Track- and tracing for audit trail
- > GLP compliant (21 CFR part 11) for documentation security

The Eco-Logical Choice

Paying your own power bill?

Environmentally friendly and energy efficient ultra-low temperature freezers traditionally consume a large amount of energy as they maintain extremely low temperatures 24/7. With today's high energy costs and focus on the environment, energy conservation has become even more important in the lab. Eco-friendly Eppendorf ULT freezers are designed to help you save energy without compromising sample security.

- > A high-efficiency compressor control system reduces cycling times to lower energy consumption and increase freezer longevity
- > High-quality insulation materials and inner/outer door gaskets provide ultimate temperature control and optimized energy efficiency
- > Environmentally safe, HCFC-free and CFC-free refrigerants for "h" versions minimize greenhouse gases
- > Biodegradable and commercially-available, high performance, synthetic compressor lubricants prevent "oil-logging"
- > Eco/Green mode to further reduce energy (while having a more dynamic temperature accuracy)
- > A single, quiet, condenser fan reduces energy consumption; compared to many freezers that require two
- > Built with 95 – 98 % recyclable materials (by weight)
- > Meets WEEE directives for disposal

New CryoCube F740 (13.5 KWh/day) vs. Premium U700 (15.9 KWh/day)

- > 15 % less energy consumption
- > 1,840 € of cost saving over 10 years
- > 3.0 tons of CO₂ emissions saved over 10 years

New CryoCube F740 (13.5 KWh/day) vs. Innova U725 (15.9 KWh/day)

- > 7 % less energy consumption
- > 2,759 € of cost savings over 10 years
- > 4.6 tons of CO₂ emissions saved over 10 years

New CryoCube F740hi (11.0 KWh/day) vs. Innova U725-G (12.2 KWh/day)

- > 10 % less energy consumption
- > cost saving 920 € of cost saving in 10 years
- > 1.5 tons of CO₂ emissions saved over 10 years

A comparison of the number of kilowatt hours per day it takes to keep 500 – 600x 2 inch boxes at a temperature of -80 °C in freezers with a volume of 700 – 800 L.

The CryoCube F740hi (230 V/50 Hz) can maintain the storage temperature using 11 KWh/day, 40 % less energy required than major competitors in the field (with focus on temp. accuracy)
 Values based on published data (230 V/50 Hz) of suppliers as of autumn 2016.

Eppendorf Handling Solutions

Liquid Handling
Cell Handling
Sample Handling

We have been developing and producing well sophisticated, groundbreaking products and solutions in the areas of Liquid Handling, Cell Handling and Sample Handling for more than 70 years. We always had one goal in mind: to make your job in the lab easier and more efficient.

To find out more about the Eppendorf product world, visit www.eppendorf.com

Liquid Handling

In 1961, Eppendorf launched the first piston-stroke pipette. Today, our broad product offerings in Liquid Handling range from manual pipettes to electronic pipettes, dispensers and burettes to automated pipetting systems. Eppendorf products are associated with state-of-the-art technology, outstanding ergonomics and award-winning design. This applies to both devices and the requisite consumables such as pipette tips and Combitips®.

■ Multipette® E3/E3x

A motor driven dispensing system that utilizes the positive displacement principle and is capable of accurately pipetting any liquid.

- > Eliminates time consuming volume calculations with auto Combitip recognition
- > One-button tip ejector for one handed operation and contact-free advanced ejection

■ Eppendorf Combitips advanced®

Eppendorf Combitips advanced have been completely redesigned and optimized to meet all the needs of any modern laboratory.

- > The 9 volume sizes (0.1 mL – 50 mL) offer a maximum range of dispensing volumes
- > High-precision dispensing regardless of the physical properties of the liquid

■ epMotion® 96

The Eppendorf epMotion 96 is a semi-automated electronic pipette for fast and precise parallel 96 channel microplate processing.

- > Without changes to the system, a large volume range of 0.5 µL to 300 µL is available
- > Performs 12 times faster than 8 channel pipettes

■ Eppendorf Xplorer®

The Eppendorf Xplorer electronic pipettes are designed to eliminate many of potential error risks associated with manual pipetting.

- > Single, 8-, and 12-channel pipettes for liquid volumes from 0.5 µL to 10 mL
- > Intuitive operating concept for quick and easy work

■ Eppendorf Easypet® 3

Experience a new dimension of electronic pipetting with complete speed control and the utmost precision.

- > Intuitive and convenient speed adjustment simply done with the tips of your fingers
- > Lightweight, well-balanced and ergonomic design that allows for fatigue-free pipetting

***MAX racks for maximum capacity.**

****Compatible with Premium/CryoCube® F570 racks.**

The racks from Innova U360, U535, U725, and U725G are compatible with the CryoCube F740 series (3 compartment). Up to 6 racks per compartment/shelf do fit. For 2 in or 53 mm freezer boxes, 504 boxes can be stored by using the Innova-line compatible racks. For maximum capacity (576 boxes), we recommend the MAX racks (not all reverse compatible to Innova ULT freezers).
