CyDye™ Value Packs (Mono-Reactive Maleimide)

CyDye Mono-Reactive Maleimides are particularly suited to antibody labeling since the dye molecules are introduced away from the antibody binding site, increasing the chance that functionality of the labeled molecule will be unimpaired.

DOMINIQUE DUTSCHER SAS

Overview

CyDye Mono-Reactive Maleimides are particularly suited to antibody labeling since the dye molecules are introduced away from the antibody binding site, increasing the chance that functionality of the labeled molecule will be unimpaired.

- Selective labeling of free sulfhydryl groups such as cysteine residues in peptides, proteins, and oligonucleotides
