

Datasheet
FBS Supreme
South America

Product	Description	Catalogue-No.	Size
FBS Supreme	Fetal bovine serum, South America, Virus and Mycoplasma tested	P30-3030M P30-3030 P30-3031	50 ml 100 ml 500 ml

Product description

Animal Serum is commonly used to supplement basal media formulations for the optimal growth of many cell types in vitro.

Fetal Bovine Serum (FBS) is the most commonly used serum to supplement cell culture media due to its high content of growth factors. FBS is effective in promoting and sustaining growth of vertebrate, mammalian and insect cells.

Composition

FBS Supreme only contains serum of high quality from defined countries as specified. Only prescreened serum is used for the final product to give a standardized and reproducible growth characteristic. A Certificate of Analysis indicating the country of origin is available for each lot of serum.

FBS Advantages

- Reproducible enhanced growth properties
- Low endotoxin level
- Suitable for many different cell types

Instructions for Use

FBS should be thawed at 2-8° C (e.g. overnight). Alternatively, to save time, it may be thawed under controlled conditions in a water bath at 37° C, gently mixing the content from time to time. In this case it is important to closely observe the thawing process and stop when a small amount of ice is still present in the serum. After thawing the serum should be mixed well to get an even distribution of protein and growth factors (do not shake to prevent foaming). Thawed serum may be stored for up to four weeks at 2-8° C, or can be refrozen in smaller aliquots for later use.

FBS is normally used in a concentration of 10%.
