

# Stability of HyClone process liquids

HyClone™ process liquids span a complete range of buffers, acids, bases, alcohols, salts, detergents, and water for injection (WFI) quality water commonly used in bioprocess production. Various tests are employed to determine a validated shelf life for each process liquid.

## Overview

Stability data for buffers and other process liquids used in the production of biopharmaceuticals and vaccines is a critical factor in maintaining regulatory compliance. Process liquids are relatively standardized with respect to component composition, but might vary with regard to component concentration. HyClone process liquids are tested against a variety of parameters to establish a validated shelf life for standard and nonstandard formulations. The stability testing data provided below provides a summary of formulations and test results as of the date of this publication. Additional stability testing data pertaining to existing or new formulations is added on a periodic basis.

## Process liquids stability data

Product description (concentration)	Storage conditions	Duration	Stability tests						
			Appearance	Conductivity	Endotoxin	Molarity	Osmolality	pH	Sterility
Acetic Acid (4 M)	2°C to 8°C	24 mo	✓		✓			✓	✓
Citrate (100 mM)	2°C to 8°C	9 mo	✓		✓		✓	✓	✓
