

Cell Boost™ 6 Supplement

HyClone™ Cell Boost 6 Supplement is designed to provide nutrients such as lipids, amino acids, vitamins, and growth factors as part of fed-batch cell culture strategies (Fig 1). Cell Boost 6 Supplement has been tested in a variety of cell lines including Chinese hamster ovary (CHO), hybridoma, NS0, HEK293, and T-cells.

Key features of Cell Boost 6 Supplement include

- Chemically defined
- Animal-derived component-free (ADCF)
- Protein-free
- No L-glutamine or poloxamer 188
- Manufactured according to cGMP guidelines

Specifications

Cell Boost 6 Supplement is designed to improve productivity through a multi-vitamin feed approach. Cell Boost 6 Supplement has been tested on a variety of cell lines including CHO hybridoma, NS0, HEK293, and T-cells. Figure 2 shows IgG1 production from a proprietary Sp2/0-derived hybridoma cultured in serum-free medium supplemented with Cell Boost 6.

Cell Boost 6 Supplement powder should be stored protected from moisture in a tightly sealed container.

Suggested preparation

1. Add 35 g of Cell Boost 6 Supplement powder to 900 mL of cell culture-grade water. If your water source is normally cool, it may be useful to adjust the water temperature. Using warmer room temperature water (22°C to 25°C) will improve solubilization time. Mix for 20 min or until dissolved.

Fig 1. Cell Boost 6 Supplement is chemically defined and animal-derived component-free.

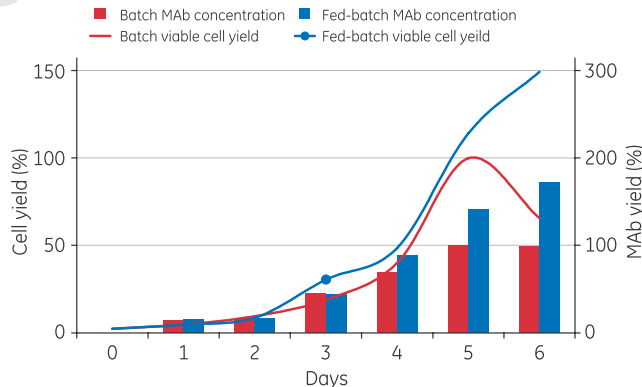

Fig 2. Production of IgG1 using a proprietary Sp2/0-derived hybridoma cultured in a proprietary HyClone serum-free medium. Fed-batch culture employed on day 3 using Cell Boost 6 Supplement.

2. Adjust pH to 7.0 to 7.4 if desired.
3. Bring volume to 1000 mL.
4. Sterile filter with 0.2 µm filter.
5. Sterile filter with 0.2 µm filter.

Preparation notes

Because of the lipid components in Cell Boost 6 Supplement, the liquid preparation temperature must be maintained higher than 20°C.

Cell Boost 6 Supplement can be formulated from 30 to 40 g/L. The supplement has specific storage, temperature, and pH requirements when formulated at higher concentrations.

Store Cell Boost 5 Supplement liquid solution at 2°C to 8°C, away from light.

General culture recommendations

Recommended supplementation range is between 20 to 200 mL/L during mid to late growth phase. It is anticipated that this will be day 3 to 4 of the culture. It is suggested that L-glutamine is monitored separately in those cultures where it is present in the culture medium, and supplemented as needed.

Related products

The six Cell Boost supplements have been designed to provide nutrients such as amino acids, vitamins, lipids, cholesterol, glucose, and/or growth factors in combinations suitable for multiple mammalian cell types. In addition to the Cell Boost supplement line, GE Healthcare Life Sciences offers concentrated liquid supplements designed to provide lipids and cholesterol to cell lines such as NS0, as well as specific nutrients for those cells using the glutamine synthetase (GS) gene expression system.

Table 1 gives an overview of HyClone supplements.

HyClone Cell Boost kit

HyClone Cell Boost Process Supplements (100 g each) contain samples of supplements designed to increase cell productivity in a variety of cell lines. Each supplement is developed through the Metabolic Pathway Design process and is chemically-defined and protein-free with no animal derived components.

HyClone LS250 supplement

HyClone LS250 is a chemically defined, animal-derived component-free lipid supplement developed to stimulate cell growth and monoclonal antibody (MAb) production in NS0 cell cultures using traditional hybridoma serum-free media.

HyClone LS1000 supplement

HyClone LS1000 supplement is a chemically defined, animal-derived component-free lipid supplement developed to stimulate cell growth and MAb production in NS0 cell cultures using traditional hybridoma serum-free media.

The supplement is formulated using a proprietary complexing process for enhanced cholesterol delivery. HyClone LS1000 has been successfully tested in a variety of serum-free medium cultures, including HyClone CDM4NS0 medium and HyClone CDM4MAb medium.

HyClone GS-Max supplement

Developed based upon traditional GS supplement formulations to provide the additional nutrients needed for high productivity in GS-cloned CHO and NS0 cell lines.

HyClone CDM4CHO medium

Increases process yields in the manufacture of recombinant proteins using a variety of CHO cell clones.

HyClone CDM4NS0 medium

Increases process yields in the manufacture of MAbs using a variety of NS0 cell clones.

HyClone CDM4MAb medium

Increases process yields in the manufacture of MAbs for therapeutic use in a variety of engineered hybridoma and recombinant myeloma cell lines.

HyClone CDM4PERMAb medium

Increases process yields in the production of human antibodies and recombinant proteins when using PER.C6™ technology.

HyClone CDM4HEK293 medium

Supports high cell density and specific cell productivity in suspension cultures.
